

At Red Bank Veterinary Hospitals we're constantly thinking of ways to better protect the health of our clients, patients, and employees.

We began researching ways to filter the air throughout the hospital in order to reduce illnesses and infections. After several months, we decided to install the RGF REME HALO®.

The REME HALO® in-duct air purifier utilizes proprietary Reflective Electro Magnetic Energy technology. It produces Hydro-Peroxide plasma that is distributed through the air handler, through the duct system, and into the conditioned living space.

Hydroperoxides occur naturally in the earth's atmosphere and are part of nature's process of cleaning the air.

This type of air filtration system:

- Reduces airborne particulates (dust, dander, pollen, mold spores)
- Kills up to 99% of bacteria, mold and viruses
- Reduces sneeze germs by 99% in the time a sneeze can reach three feet.
